

15. A floor covering according to claim 13, wherein at least one of the second and third projections have one of a flat square prism and a frustum.
16. A floor covering according to claim 13, wherein at least one of the second and third projections have one of a spherical segment, a flat truncated cone, and a flat cylinder.
17. A floor covering according to claim 15, wherein the second projections have one of a square prism and a frustum with rounded edges and rounded areas adjoining the underside of the covering extending to the plane of the floor covering, and the third projections have the shape of a spherical segment.
18. A floor covering according to claim 13, wherein edge measurements of the second projections correspond to at least a distance between each of the second projections.
19. A floor covering according to claim 13, wherein edge measurements of the third projections are less than a distance between each of the third projections.

20. A floor covering according to claim 19, wherein the edge measurements of third projections is less than $\frac{3}{4}$ of the distance between each of the third projections.
21. A floor covering according to claim 13, wherein grid sizes of arrangements of the first and second projections essentially correspond, and a grid size of the third projections corresponds to the grid size of the arrangements of the first and second projections or a multiple thereof.
23. A floor covering according to claim 13, wherein a height of the first projections is less than $\frac{1}{3}$ of its diameter in the covering plane and a height of at least one of a second and third projections is in a range of between $\frac{1}{5}$ and $\frac{1}{2}$ of its diameter in the covering plane.
25. A floor covering according to claim 13, wherein at least one of the perforations and the recesses have one of a circular cross-section and a cross-section of a segment.

REMARKS

Reconsideration of the subject application in view of the present amendment is respectfully requested.
